Direct pathway (physics)
A. Hot proto-Earth and secondary disk
B. Retrograde flyby of planet B (a few hours)
C. Paste accretion (days to months)
Tides (billions of years)
The Moon
input assumption
redistributes the disk
one dominant body
outward migration
the starting datum
Comparison gates with the Moon as it is (retrodictive reading)
Mass ≈ 1 M_L
Distance ≈ 60 R⊕
Angular momentum
Isotopes O, Ti, W
Water
in part: retained in some realizations
consistent for the two retained 4.5 M_L runs
excess in all realizations
expected, to be computed
dynamical channel open
Green: consistent · Orange: in part · Red: excess · Grey: to be computed or open
